

**Dominion Energy Virginia**  
**Rural Broadband**  
*Overview video*

Welcome to the overview of Dominion Energy's Rural Broadband Program. At Dominion Energy, we know that Actions Speak Louder. Across every part of our company, we are transforming the way we do business to build a more sustainable future for Virginia and support the communities we serve. But the harsh reality is many Virginians live without easy access to broadband Internet. Dominion Energy can help.

We are in a unique position to bridge the broadband gap in rural areas as we move forward with efforts to transform our electric grid and connect renewable energy resources. We know that home internet access is vital for today's society. School coursework, remote education, access to healthcare, telemedicine, job searching, and working from home are just a few activities that are powered by access to broadband internet.

Dominion Energy proposes to provide "Middle-Mile" fiber optic cable infrastructure to bridge the gap to rural locations. Local internet service providers will connect customers interested in broadband internet by building the "Last-Mile" infrastructure to serve these customers. Our partnerships are making it easier for local Internet Service Providers to reach rural communities unserved by broadband.

Dominion Energy is installing fiber optic cable to better serve our electric utility customers. Where needed, we form additional partnerships with property owners to use our infrastructure to help serve those without sufficient access to broadband internet.

Work is underway across Virginia...  
And notifications are sent to property owners before projects begin.

Dominion Energy has partnered with multiple Internet Service Providers – or 'ISPs' – in over two dozen counties and is planning to build over 2,000 miles of middle-mile fiber optic cable. We are working together to overcome the challenges that are too great for one entity to tackle alone.

Dominion Energy crews and contractors are working in  
Western Virginia,  
Eastern Virginia,  
the Northern Neck region,  
Central Virginia,  
And we are also scoping future work locations in additional areas.

For more details, please visit our website at [DominionEnergy.com/RuralBroadband](http://DominionEnergy.com/RuralBroadband) where we provide a list of our partner organizations and contractors working across Virginia to build middle-mile fiber, as well as helpful links to all ISP partner websites for additional connectivity information.

Thank you for taking the time to learn about this important initiative.
