Ladysmith-Elmont Rebuild Project

AT DOMINION ENERGY, we are committed to continually reviewing and analyzing our energy infrastructure to provide safe, reliable, and affordable electricity to our neighbors. You are receiving this postcard because we are currently preparing to address an aging electric transmission line located near your property.

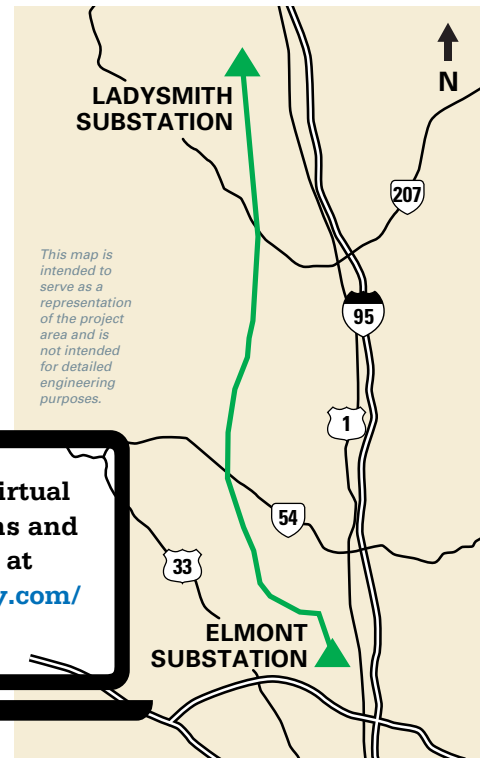

After more than five decades of service, the 26.2-mile line is at the end of its service life and needs to be rebuilt to bring facilities up to current reliability and safety standards. Our plan is to replace the current weathering-steel lattice structures with new galvanized lattice structures.

Due to the ongoing public health concerns resulting from the spread of the coronavirus, we plan to host a virtual community open house from 6 p.m. – 7 p.m. on March 30, 2021. In advance of the meeting we encourage you to visit the project's dedicated webpage at DominionEnergy.com/ladysmith. This page will provide details on the need for the project, maps, and information on structural changes.

In addition, we want to inform you that we are mindful of our activities and maintaining property owner interactions with the appropriate social distancing. The work we do is integral to maintaining grid reliability and our crews will continue to perform work as needed to provide reliable energy.

Please know that we are dedicated to working safely and courteously in your community. We will continue to keep you updated on our progress.

CONTACT US — Visit our website at DominionEnergy.com/ladysmith for project updates. Or contact us by calling 888-291-0190 or sending an email to powerline@dominionenergy.com.

WHAT:

This proposed project is to rebuild a portion of a 500 kV electric transmission line within an existing corridor. An application for project approval will be submitted in April 2021 to the Virginia State Corporation Commission (SCC).

WHY:

The existing infrastructure has reached the end of its service life and needs to be replaced to maintain reliable service and comply with current safety standards. New structures will be built in the same general location as the existing structures.

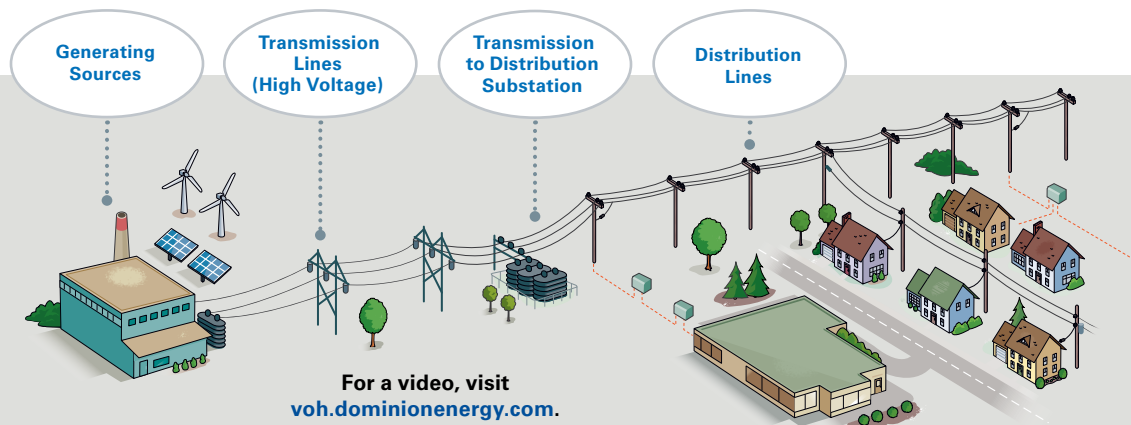

WHERE:

The 26.2-mile transmission line is located between our Ladysmith and Elmont substations in Caroline and Hanover counties.

At Dominion Energy, we know many of our customers are facing challenges due to the COVID-19 pandemic. We're here to help. In accordance with the law recently passed in Virginia, we're offering payment plans between 6 and 24 months. To set up a payment plan, or view additional assistance options, please visit DominionEnergy.com or call 1-866-366-4357.

Delivering Clean, Safe, Affordable and Sustainable Energy

Transmission lines are the tall, high-voltage lines that carry electricity over long distances from power generation facilities to substations.
